

**I DAY:
12,400,000 GALLONS**

Keep the Boise River flowing — water wisely!

In the greater Boise area, we use an average of 12.4 million gallons of water every day. In the summer, water use spikes dramatically. We can meet our communities' water needs for decades, and keep the Boise River healthy for fish, wildlife and recreation — if we use water more efficiently both inside and outside of our homes. Please use water wisely and protect the Boise River for generations to come.

Use-Only-What-You-Need TIP 6:

Fix water leaks inside and outside your home, install WaterSense appliances, water your lawn and garden only when necessary.
